

Making your garden beautiful

minsterpaving
QUALITY PAVING MANUFACTURERS

Welcome to the Cotswolds' quality paving manufacturer

If you are looking for high quality paving products, true value for money, experienced advice and genuine customer service you are in the right place! Minster Paving is an independent family owned and run business with 35 years experience in the meticulous manufacture of high quality paving products and in helping home owners achieve the stunning patios of their dreams.

Our easy to follow laying guides and patterns help you to design your patio and we are always happy to provide you with straightforward, jargon free advice.

A commitment to quality runs throughout our business. All our products are made in Witney, only 12 miles from Oxford, using the finest materials, sourced as locally as possible, and with the latest technology to ensure maximum durability and an unsurpassed finish.

Unlike other paving specialists, our paving slabs can be bought individually or in packs and you can have as many or as little as you need.

Because we manufacture everything ourselves, we also have the flexibility to produce special orders and can produce pretty much everything in bespoke colours. So, if you can't see exactly what you are looking for, just ask. If we can, we will!

We have a full range of patio products and accessories from slabs to stepping stones, planters to feature walls, and have everything you need to transform your garden. So, whether you are dreaming of a garden retreat from a hectic lifestyle or a place to enjoy with family and friends, we are here to help!

Minster Flagstone

This is a classical range that creates a beautiful finish. The Minster Paving Flagstone range is named this way because it creates a look typical of the village Old Minster just half a mile down the road and has been cast from genuine reclaimed flagstones creating a charming antique appearance. With excellent detail in the subtle texturing, the choice of colours available as well as the larger sizes that can be used in this range, a truly authentic look is achieved.

Yorkstone Riven

Yorkstone Riven is an attractive and versatile slab that can suit a modern or cottage garden. With its characteristic texturing and its irregular edges this paving slab looks natural and authentic. Yorkstone Riven comes in a choice of four colours enabling you to choose your patio in a shade that suits the style of your garden. For the creation of a truly unique space we also have a number of features that will compliment the range leaving you with a beautiful finish to your garden.

Worn Limestone

Worn Limestone is highly individual in character with a distressed worn patina replicating original antique flooring from the Normandy region in France. Produced in light tones it goes without saying that it looks good outside, but due to its barely undulating surface it is ideal for furniture and works beautifully in interior applications such as a hallway or kitchen.

Circles & Features

Our range of circles and features is yet another way to create the look you would like for your garden. We have a circle to compliment every range, which can also be made in any shade that we do. Of course it doesn't have to be just a circle, Squaring off kits are available so it can be incorporated as part of your patio.

You can also use the individual circle paving slabs to create a winding path in your garden.

The Octagon creates a charming feature, again available in all shades. It is excellent for use around conservatories and can save the need for cutting Paving Slabs.

Minsters guide to laying your patio

As with most DIY and Construction tasks, the best results are achieved by preparing properly. When it comes to laying Minster Paving, thorough preparation will help you create a patio or pathway to be proud of.

Planning:

Start by measuring the area that is to be paved and calculating just how much paving will be required. Minster Paving can help you with this by suggesting a selection of sizes that can be combined to best cover the area.

It’s important to plan how the new paving will be drained before starting work. Will it simply be a matter of allowing surface water to run off at the edges and drain onto the garden, or will it be directed towards a gully or a linear channel? Wherever the water is to be sent, the paving will need to slope or “fall” in that general direction, and there will need to be adequate slope or “fall” to prevent water hanging on the surface of the paving for any longer than is absolutely necessary. It is generally recommended that the fall should be at least 1:60, which is roughly 17mm per metre or three-quarters of an inch per yard.

Tools you will need:

- Shovel or spade
- Wheelbarrow
- Cement Mixer
- Large trowel for spreading mortar
- Small trowel for pointing
- Rubber mallet
- Ball of string
- Wooden pegs or steel bars/pins
- Spirit level
- Tape measure or rule
- Cut-off Saw

Preparation:

Remove any turf and excavate to a depth of at least 150mm (6”) to remove all topsoil. Dig off an area slightly larger than necessary to ensure there is ample working room. Normally an extra 150-300mm (6” - 12”) is adequate.

Set up taut string lines as guides to the intended levels. Knock in wooden pegs or steel bars exactly on the outside edges of the planned paving and tie on string lines at the height of the paving. Stretch the string tight and fasten to the next peg, creating a straight and true line that will act as a guide to both the alignment and the level of the paving as it is laid. Bear in mind that, except at doorways, paving should always be laid so it is at least 150mm (6”) below the damp proof course (DPC) of any building.

All good paving has a support layer beneath. This is usually referred to as a sub-base and comprises a layer, roughly 75-100mm (3-4”) thick, of crushed stone or recycled concrete.

This is spread out over the working area, levelled off and then thoroughly compacted using a vibrating plate compactor which can be hired at most Tool Suppliers. The sub-base should have the same profile as that planned for the actual paving, so if the paving is to drain towards the garden, the sub-base should fall in the same direction.

The aim is to create a stable sub-base layer which is reasonably accurate and lies roughly 50-75mm below the finished paving level, so that, when laid, the flagstones are sitting on a mortar bed that has a fairly uniform thickness. Check the level of the sub-base by measuring from the string lines once it is compacted.

Laying the paving:

Once the sub-base is complete, the next step is to lay the slabs. Plan in advance what pattern or arrangement will best suit your project. For pathways, it’s often a single strip of slabs laid one after the other, but larger areas such as patios and driveways offer more laying options. Will it be simple courses running along or across the length of the area or will it be something more decorative such as a random layout? It’s important that you know what layout will be used before you start to lay.

Minster slabs are manufactured to the highest possible standards, but they need to be properly laid to ensure you get the best from them. In all instances, we strongly recommend that you lay the slabs on a full mortar bed. This means having the whole of the underside of the slabs supported by cement mortar. The lazy way of using spots or dabs of mortar at each corner does not provide full support for the slabs and often results in cracked or rocking slabs.

Make the bedding mortar using a coarse sand (we can help you with this!). Mix 4 parts of the sand with 1 part cement, and when all the dry ingredients are thoroughly mixed, add clean, cold water, a little at a time, until the mixture starts to stick together. Ideally, the mortar will be damp without being overly wet and messy.

Spread the laying mortar onto the ground and level it out using a trowel to a thickness of around 30-40mm (1¼” - 1¾”). The bed needs to be just high enough so that, when the slab is positioned, it lies 6-10mm high (¼”-½”). Use a rubber mallet to carefully tap down the slab until it is at the correct level. Check the fall using a spirit level, and check that there are no ‘lips’ between the new slab and any that have been laid previously.

Always leave a gap of approximately 8-15mm (¼”-½”) between adjacent slabs and between the slabs and any wall, edging or other hard fixture. This will be filled with a mortar once the paving has set hard.

If any mortar has splashed or dripped onto the surface of the slab, wipe it off immediately with a damp cloth and clean water.

Never, ever stand on the newly laid paving. It needs to be left undisturbed for at least 24 hours to give the mortar a chance to

harden. Only ever work from the unpaved area. Lay one slab at a time and get it right before moving on to the next one. Once several slabs have been laid, use a straightedge timber or a long spirit level to check the evenness over the surface,

Any slabs that need to be cut to suit the layout or fit around obstructions such as drains or manhole covers should be cut using a cut-off saw which can be hired-in when needed. Follow the safety instructions very carefully. All concrete and stone dust is harmful so make sure you wear the right type of mask and eye protection at all times. The saw should have dust suppression which is usually a hose attached to an outdoor tap to spray the dust as it emerges from the blade and prevent is clouding the atmosphere. You hire supplier will be able to advise.

Jointing:

The next task is to carry out the jointing. The mortar beneath the slabs must be given adequate time to start to harden. We usually recommend at least 24 hours, but more time may be required in cold or damp weather. Once the bed is sufficiently hard, they can be walked upon with care. Avoid standing on the corners; try to place your weight in the centre of each slab.

The joints between each slab need to be filled with a mortar. This can be a cement mortar made using 3 parts sand with 1 part cement and just enough water to make it damp, or it can be one of the modern resin mortars which are brushed into the joints and left to set without staining the slabs.

Cement mortars need the paving to be dry. The mortar is carefully pushed into the empty joints using a trowel, and then packed down and polished smooth using a pointing bar. Any spills or splashes must be wiped with a damp cloth immediately because they will stain.

Resin mortars are more expensive but they require less skill and, used properly, will not stain the paving. Resin mortars work best when the surface of the paving is wet. They are brushed into the empty joints where they self-compact and start to harden over the next 12-24 hours. Any excess resin mortar must be swept off the surface before it starts to set.

Whether you have used resin or cement jointing, the paving needs to be left for at least 24 hours so the mortar will set. After that, the paving can be used with care more or less immediately. We’d recommend giving it at least three days if possible before using it or loading it with patio furniture.

And then, if you’ve followed this advice, you can look forward to many years of trouble-free enjoyment from your beautiful new Minster Paving patio. Enjoy!

Laying Patterns

Using a laying pattern can transform an area from ordinary to unique, it can also make life a lot simpler if you are laying the patio yourself.

We have created a few ideas to help, based on standard sizes in our ranges. These diagrams are laid out opposite.

If you see a pattern that you would like to re-create you can order the correct number of paving slabs, saving you from having too many or little. To make it even easier, show us the pattern you like, along with your measurements and we can work out how many of each size that you need.

4 Size Random (area = 3.6m x 3.6m = 12.96m sq)

Consists of 18 **600 x 600**, 24 **600 x 300**, 24 **300 x 300**

Terms and Conditions of Sale

We hope you enjoy many years of use with your new patio, below is some information that should be noted.

Colours

Slight colour and shade variations can occur in concrete paving slabs replicating the natural variations you would see in real stone. Variation between batches can occur and it is therefore recommended that before laying commences, slabs are drawn from the packs and mixed to suit. Colours can change and weather over time, the way in which this happens is dependent upon the surrounding conditions. Strong sunlight, shade and naturally occurring variations in the aggregates used can all alter this. This is not detrimental in the use of the slabs in any way and will generally enhance the appearance as it creates a natural finish. As with natural stone, small brown patches may appear. This is due to iron oxidation occurring, again this is not detrimental to the slabs and these marks will weather down with time.

Efflorescence

On occasions you may notice white patches appearing on your patio, this is known as efflorescence. This condition can occur with all concrete products that has a high cement content. It is more noticeable when the slabs are dry and is due to deposits of calcium oxide reacting with carbon dioxide. This will disappear with time and generally does not reappear again.

Please note that should there be any other defects other than the above mentioned naturally occurring ones, Minster Paving Ltd should be notified before the paving slabs have been laid. Once the paving slabs have been laid Minster Paving Ltd cannot accept responsibility for any defects or the above mentioned conditions.

Cleaning

We do not recommend the use of a jet/pressure washer. Washing your patio with a brush should be adequate but should you wish to use a cleaning product, use only ones that are recommend for patios and follow the manufacturer's instructions. DO not use de-icing slats on your patio, this can affect the surface appearance.

Weed killers/insect repellents etc with an acid or alkali based content can affect the colour and surface of the slabs, again we recommend that these are not used on your patio and cannot accept responsibility for any variations that occur through uses that are not intended for concrete paving slabs.

Dimensions

All sizes stated are nominal and may be subject to change. Slight variations in thickness may occur and Minster Paving Ltd therefore recommends that slabs are always laid on a mortar bed. Small fissures may occur on larger individual slabs as a result of shrinkage. This does not necessarily affect the long-term performance of the product.

Liability

Liability in respect of any statements, conditions, warranties and representations made on behalf of Minster Paving Ltd is limited in accordance with the terms set out in the Standard Conditions of sale. Whilst every effort is made to give sound advice, Minster Paving Ltd cannot accept responsibility or liability in respect of products being used for any purpose other than those for which they were intended. Due to continuous development, products may be subject to change without notice. Customers should check information is up to date.

Returns Policy – whether on or off the premises

If buying off the premises under The Consumer Protection (Distance Selling) Regulations 2000 you may have a right to cancel.

Whether buying on or off the premises your right to cancel will expire after seven working days, starting the day after the day that you received the goods. If you wish to exercise these cancellation rights then please contact us.

Once you have notified us you are cancelling your contract, we will re-credit you as soon as possible and within a period of 30 days starting with the day cancellation was given. This is provided that the goods in question are collected by us in the same condition as originally delivered, including all packaging and banding not removed. If you cancel your order then you will be responsible for the cost of returning/us collecting the goods. We will be entitled to deduct the costs of recovering the items from the amount to be credited to you.

Orders cancelled will also incur a 20% handling charge that can be deducted from the amount credited to you.

Multi buy offers, discounted goods and perishable goods (cement, jointing compound etc) cannot be exchanged or refunded.

All special orders that are non-stock items must be paid for in full prior to ordering and may incur a delay in delivery, and are subject to a non-refund or return policy.

Proof of purchase always necessary.

Pallets

We reserve the right to charge for pallets, this price may change as costs to us change. A full refund will be given, provided the pallets are returned to Minster Paving Ltd in good condition within six months of the invoice date. No refunds can be given without the original invoice.

Delivery

Our drivers are instructed to deliver to the kerbside and not leave the public highway, if requested to do so, and the driver deems it safe, then you will be required to sign a card to obtain an indemnity against any damage incurred.

Minster Paving Limited will not accept liability for any damage caused whilst making delivery, for example manhole covers, tarmac indentation, overhead cables, posts etc or to the Minster Paving vehicle.
